Narrative

On June 18, 2026, I Deputy F. Kelly, responded to the lobby of the Buckingham County Sheriffs Office to speak with a complainant in reference to them being hacked. Upon my arrival I spoke with Christopher Baez and Carcamo Zabala. When speaking with both parties they stated that somebody had hacked there hot spot router and got into there computers and phones. Zabala stated that there were several instances where she would track her sons phone and it would state that he was in two locations one of them being where he actually was and one across the country. While talking to both parties they stated nothing was taken, remotely in regards to money or other belongings. They did not mention that there socials were taken either. Both Parties believe that they were being tracked through there devices and there cars. They stated they wrapped their computers in aluminum foil to prevent the person who hacked there computer from getting into another device. They both believe that somebody used an RFID device to get into there cars remotely. Zabala said that one day when she was driving all of her electrical system started to malfunction. She also mention finding a device in the car located in the glove box. Both parties stated that they would go get the vehicle looked at to see if it was just having electrical issues. They also stated that they had also filled out a Complaint on the FBI website IC3.gov. Nothing Further at this time.
